

First Time Using Linux to Write a Blog

Su Jianlin

September 13, 2009

September 13, 2009, is a special day for me. Because on this day, I used Linux, and for the first time, I used Linux to browse the web, write a blog, and use QQ. This is the first blog post I have written using Linux, and I believe there will be a second, a third...

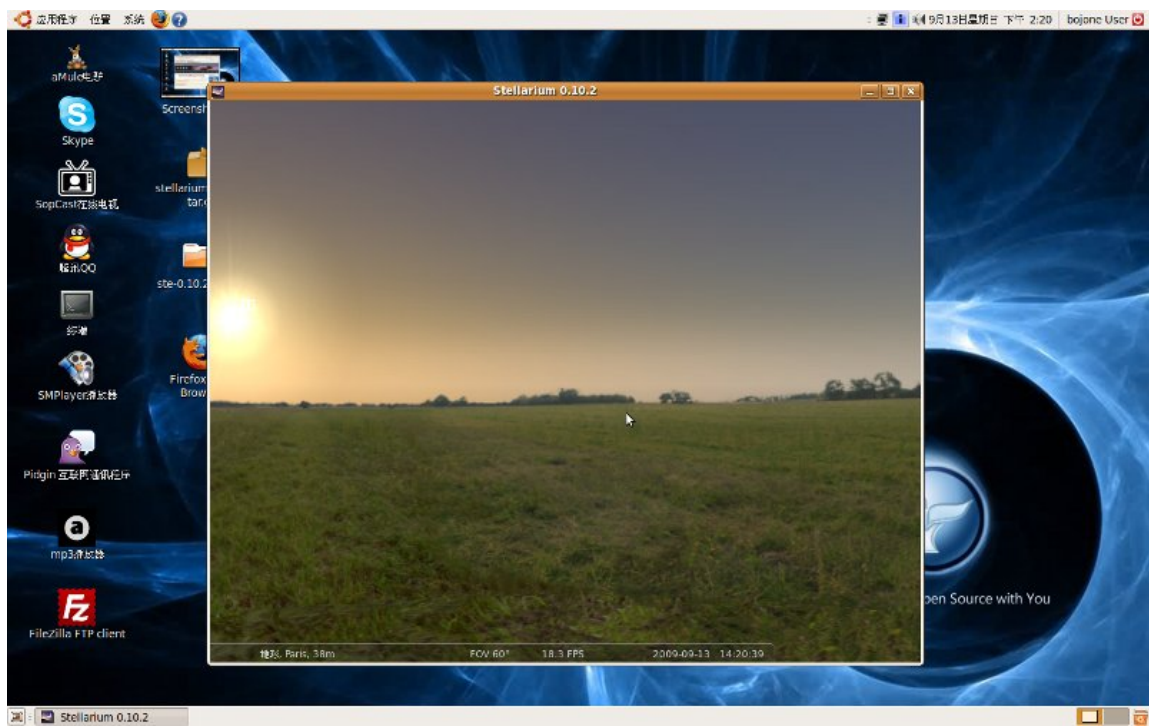

Although I had used Linux before, those were just brief trials, usually lasting no more than a week. But this time, as a scientific researcher, I have chosen Linux again and plan to gradually become familiar with it, eventually switching to Linux entirely.

The reasons are actually quite simple:

1. It is a very “cool” thing to do. Just think, among the people around you, you are the only one who knows how to use Linux—that feeling is so proud!
2. As a science enthusiast, I can’t be imprisoned within Microsoft Windows’ commercial or pirated software all day, can I? Using pirated software is improper, and I cannot afford the genuine version (I want to save more money to buy a telescope).
3. The scientific software I use, such as Maxima and Stellarium, both have Linux versions. Using Linux will not affect my use of these programs. Since that is the case, why not?

I am currently using the Ubuntu modified by Ylmf. I intend to make Ubuntu my default system in the future, just as Windows XP was before.

Here are some pictures:
