

Changed a Photo Album Program

Jianlin Su

June 13, 2012

Prior to this, [BoJone's Photo Album](#) used the phpyou photo album program. I originally liked it for its simplicity and convenience, so I did not mind that it had not been updated for many years. Later, I discovered that this program was terrible (I am not sure if I downloaded the wrong version). Yesterday, I checked the database and found that my database was 16MB in size, while phpyou alone occupied 12MB. Even more ridiculously, it seemed to have many inappropriate and sensitive pieces of information embedded within it. Therefore, BoJone has resolutely abandoned it.

Now I am using [kh_mod](#) ([Chinese website](#)), which is also built based on the previous MG2 and belongs to the category of simple photo albums. The new album basically retains the original directory structure and images. Of course, the previous album had not been updated for a long time; I will share more moments with everyone in the future ^__^
